

Congratulations! You have just purchased one of the premium products from 3monkeez accessories range.

SCOPE OF APPLICATION

DM1.5

IMPORTANT INFORMATION

Note: Please follow the below procedures. If the below procedures are not followed it may impact the life of some components and void warranties.

- Ensure the installation surface is clean, dry, and free from dust, grease, oil, or loose debris prior to application.
- The installer is responsible for confirming substrate suitability, including compatibility with adhesives (if required).
- Rolls should be measured and cut accurately to fit the intended area before fixing.
- Avoid stretching or compressing the material during installation, as this may reduce performance.
- Joints and overlaps should be installed tightly to minimise gaps and maintain acoustic effectiveness.
- Appropriate personal protective equipment (PPE) such as gloves and eye protection should be worn during handling and installation.

INSTALLATION INSTRUCTIONS

1.

Unroll the sound deadening material and inspect for damage or debris stuck in the adhesive.

Remove any contaminants and ensure the surface is entirely pristine before continuing.

2.

Determine the optimal location for sound deadener application and measure and cutout sheet/s.

3.

Thoroughly clean product surface to ensure appropriate adhesion of the sound deadening material.

Only use residue-free cleaning solutions (e.g., Isopropyl Alcohol (IPA) or solvent-based degreasers). Avoid cleaners that leave films or contaminants.

4.

Adhere sound deadening material to the product surface. Progressively apply edge to edge, ensuring uniform surface contact to prevent air gaps or bubbles.

STAINLESS STEEL MAINTENANCE AND CLEANING INSTRUCTIONS

Stainless steel products must be cleaned on a regular basis to maintain the ability to resist corrosion. The surface of stainless steel has a protective layer that creates a protective shield against oxidation; which makes it durable and long lasting. Protecting this layer is important to ensure the longevity of this product.

Cleaning stainless steel products is an easy task when done regularly:

- Clear away all debris from the surface with a microfiber cloth or soft sponge; don't use abrasive materials as they have a negative impact on the protective layer.
- Once cleared of debris, go over the surface with a food safe stainless steel cleaner, bicarb soda or mild detergent and water. The best chemicals for stainless steel contain alkaline and don't have chloride in them.
- To remove stubborn stains, use a good quality stainless steel cleaner and non abrasive cloth.
- Rinse thoroughly with clean fresh water.
- Towel dry the product with a soft dry absorbent cloth after cleaning and use. This will prevent mineral deposits building up on the surface of the product.
- Once dry, use a food safe stainless steel or metal polish.
- Follow the grain of the metal to ensure the best results and to avoid further damage to the surface.
- Always keep the product clean and dry when not in use.
- Don't leave anything citric on the product as it can etch the surface over time.
- Don't leave soaps and other cleaners on your stainless steel product overnight.
- Don't leave damp sponges or cloths on the inside or edge of the product when not in use.

TIP - Cleaning your stainless steel equipment after each use as above will ensure the product remains in good condition.
